

CORN

6331VT3

Relative Maturity: **111.00**

Description

- > Replaces 631 and 6440, using the same male with a new female, greatly improving stalks, roots, staygreen and intactness
- > Exceptional on Goss's wilt; very good on anthracnose and NCLB
- > Same stature and flowering date as 631; increase populations by 2,000 to 3,000 plants over 631 recommendation
- > Best on sandy loams and silt loams, avoid poorly drained clay loams

Characteristics

Cob Color	PINK	Ear Girth	M-G	Ear Height	M
Flower Date	M	GDU to Maturity	2740	Kernel Rows	16-18
Leaf Habit	S-U	Plant Height	M-T	Synchronized Nutrition Rating	M

R 7™ PLACEMENT STRATEGY R7

The Right Genetics

Genetic Type: HY.lh. x S.

The Right Soil Type

Best yield and performance in medium to lighter textured soil

The Right Plant Population

Response to Population = 19
Moderate ear flex and density tolerance allows a wide range of populations

The data presented herein represents the most current information available, but results may vary due to environmental conditions.

CORN

6331VT3

Relative Maturity: 111.00

The Right Cropping System

The Right Traits

Technology Traits: YGRW/RR2/YGCB
Refuge Requirements:

The Right Plant Nutrition

The Right Crop Protection

The data presented herein represents the most current information available, but results may vary due to environmental conditions.

6331VT3

Relative Maturity: **111.00**

Technology Traits:

- GENSS = Genuity™ SmartStax™
- GENVT3P = Genuity™ VT Triple PRO™
- RR2 = Roundup Ready®
- YGCB = YieldGard® Corn Borer
- YGRW = YieldGard® Rootworm
- CB = Agrisure® Corn Borer
- RW = Agrisure® Rootworm
- GT = Agrisure® Glyphosate Tolerant
- HXT = HERCULEX® XTRA
- HX = HERCULEX®
- LL = LibertyLink® System
- NDS = NutriDense® Silage

Plant Height:

T = Tall, M = Medium, S = Short

Ear Height:

H = High, M = Medium, L = Low

Staygreen:

Late-season health coming from strong leaf-disease resistance, enhancing hybrid standability

Insect Resistance Management:

Insect-protected crops are genetically improved to provide in-plant protection against selected insect pests. Beneficial insects are not affected. To preserve the benefits and insect protection of these technology crops, Monsanto Technology LLC, Syngenta Crop Protection and Dow AgroSciences have developed insect resistance management (IRM) guidelines that must be incorporated by everyone purchasing and planting insect-protected crops.

Genetic Type:

- N = Northern
- S = Southern
- E = Eastern
- E2 = Eastern 2
- W = Western
- EH = Early Health
- LH = Late Health
- HY = High Yield
- F = Flint
- T = Tropical
- UR = Unrelated

Ear Flex:

Ability of hybrid to increase ear size with decreasing population. Flexible-ear type hybrids are made more tolerant to continuous corn by dropping plant population.

Flower Date:

L = Late, M = Medium, E = Early

Leaf Habit:

S-U = Semi-Upright, E = Erect

Before opening a bag of seed, be sure to read and understand the stewardship requirements, **including applicable refuge requirements for insect resistance management**, for the biotechnology traits expressed in the seed as set forth in the Monsanto Technology Agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation to comply with those stewardship requirements.

These ratings reflect trends observed in research trials that change with variations in rainfall, temperature, crop production patterns and other factors. Ratings on new hybrids are based on limited data and may change as more data is collected.
