

CORN

6818VT3

Relative Maturity: **114.00**

Description

- > Combines the female of 5891, 591 and 7505 with the male of 818, making an earlier version
- > Best defensive hybrid for corn-on-corn acres in the industry at this maturity; fixed-ear type requiring higher populations, even on sandy soils
- > Strong root system with exceptional ability to silk and fill the ear under stress for outstanding heat and drought tolerance

Characteristics

Cob Color	RED	Ear Girth	M-G	Ear Height	M
Flower Date	M	GDU to Maturity	2830	Kernel Rows	16-18
Leaf Habit	E	Plant Height	M	Synchronized Nutrition Rating	MS

R 7™ PLACEMENT STRATEGY R7

The Right Genetics

Genetic Type: HY. x s.W.T.

The Right Soil Type

"Well drained, medium textured soils for the best performance"

The Right Plant Population

Response to Population = 18
Needs and tolerates high density increasing with good H2O and fertility

The data presented herein represents the most current information available, but results may vary due to environmental conditions.

CORN

6818VT3

Relative Maturity: **114.00**

The Right Cropping System

The Right Traits

Technology Traits: YGRW/RR2/YGCB
Refuge Requirements:

The Right Plant Nutrition

The Right Crop Protection

The data presented herein represents the most current information available, but results may vary due to environmental conditions.

CORN

6818VT3

Relative Maturity: **114.00**

Technology Traits:

- GENSS = Genuity™ SmartStax™
- GENVT3P = Genuity™ VT Triple PRO™
- RR2 = Roundup Ready®
- YGCB = YieldGard® Corn Borer
- YGRW = YieldGard® Rootworm
- CB = Agrisure® Corn Borer
- RW = Agrisure® Rootworm
- GT = Agrisure® Glyphosate Tolerant
- HXT = HERCULEX® XTRA
- HX = HERCULEX®
- LL = LibertyLink® System
- NDS = NutriDense® Silage

Plant Height:

T = Tall, M = Medium, S = Short

Ear Height:

H = High, M = Medium, L = Low

Staygreen:

Late-season health coming from strong leaf-disease resistance, enhancing hybrid standability

Insect Resistance Management:

Insect-protected crops are genetically improved to provide in-plant protection against selected insect pests. Beneficial insects are not affected. To preserve the benefits and insect protection of these technology crops, Monsanto Technology LLC, Syngenta Crop Protection and Dow AgroSciences have developed insect resistance management (IRM) guidelines that must be incorporated by everyone purchasing and planting insect-protected crops.

Genetic Type:

- N = Northern
- S = Southern
- E = Eastern
- E2 = Eastern 2
- W = Western
- EH = Early Health
- LH = Late Health
- HY = High Yield
- F = Flint
- T = Tropical
- UR = Unrelated

Ear Flex:

Ability of hybrid to increase ear size with decreasing population. Flexible-ear type hybrids are made more tolerant to continuous corn by dropping plant population.

Flower Date:

L = Late, M = Medium, E = Early

Leaf Habit:

S-U = Semi-Upright, E = Erect

Before opening a bag of seed, be sure to read and understand the stewardship requirements, **including applicable refuge requirements for insect resistance management**, for the biotechnology traits expressed in the seed as set forth in the Monsanto Technology Agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation to comply with those stewardship requirements.

These ratings reflect trends observed in research trials that change with variations in rainfall, temperature, crop production patterns and other factors. Ratings on new hybrids are based on limited data and may change as more data is collected.
